                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                           C. Important role in the pathogenesis of AIDS-related Kaposi's sarcoma. The invention relates to a novel method of detecting the presence of human herpesvirus 8 in a biological sample using peptides representative of herpesvirus 8 in a biological sample using peptides representative of herpesvirus 8 in a biological sample using peptides with an antibody-containing one common relates, immunogenic HHV8 peptides with an antibody-containing one biological sample, and detecting the formation of a complex between the peptide and the antibody. The presence of a peptide-antibody complex between the peptide and the presence of human herpesvirus 8. The detection of HV8 infection can be used to diagnose AIDS-associated Kaposi's sarcoma. The HV8-specific antibodies are useful therapeutically when for the passive immunisation of a human against HV8 infection, thereby reducing HY8 crelated disease. The detection assays are highly specific, sensitive and accurate. Early detection and treatment of Kaposi's sarcoma could contain the severity of symptoms related to AIDS and the sensitive techniques could reduce erroneous characterisations of skin disorders. Previous assays for HY8 antibodies such as immunofluorescence assays, immunoblots and enzyme immunosassays lack the sensitivity and accuracy needed for reliable diagnosis of Kaposi's sarcoma. Further advantages of the assays are that reproducible restricts are obtained and the method contained and the method contained the method contained and the method contained and the method contained and the method contained the method contained and the method contained and the method contained and the method contained the method contained and the method contained the method contained and the method contained the method 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

17-DEC-1996
                                                                                                                                                                                                                                                                                                                                                      proteins. The receptor proteins were used to design polypeptides, pref. based on the transmembrane domains, for use in G-protein coupled receptor ligand binding assays. The polypeptide fragments retain biological activity such as binding a GPR ligand or modulating GPR ligand binding to a GPR (see AAW02747-W0299) for examples of polypeptide fragments). The polypeptide fragments can be used in compositions for treating subjects suffering from a pathology related to a GPR abnormality e.g. a psychotic disorder such as schizophrenia.

The present sequence is the Kaposi's sarcoma-associated herpesvirus, CC (KSHV) latency-associated nuclear antigen (LANA). KSHV is also known CC as Human Herpes Virus 8 (HHV8) and belongs to the rhadino virus, or CC as Human Herpes virus class. The LANA protein is necessary for the CC gamma-2 herpes virus class. The LANA protein is necessary for the CC rhadino virus infection is implicated in a variety of diseases e.g. CC rkaposi's Sarcoma (KS), primary Effusion Lymphoma (PEL) and multicentric CC (Kaposi's Sarcoma (KS), primary Effusion Lymphoma (PEL) and multicentric CC (Castleman's diseases. In addition, KS is a common malignancy in HIV CC castleman's diseases. In addition, KS is a common malignancy in HIV CC (Castleman's diseases. In addition, KS is a common malignancy in HIV CC (Castleman's CKSHV persists in host cells in a latent form. One of the few CC patients KSHV persists in host cells in a latent form. One of the few CC genes expressed from the latent virial DNA is LANA. LANA associates with CC (RVCAE), thereby providing a tethering function: the KSHV DNA episome is "tied" to the host chromosomes. This allows the viral DNA to persist in CC (molecules that inhibit LANA interaction with RVCAE, thereby interfering with the latency cycle of this virus. Potential antiviral treatments for the above mentioned diseases may therefore be based on LANA deregulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Kaposi's sarcoma-associated herpesvirus LANA

                                                                                                                                                                       Ś
                                                                                                                                                                                                                                                                                                                     The invention relates to isolated polynucleotide (I) and CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polynucleotides are also used in diagnostics as expressed sequence tags of identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a molecular weight markers and as cc. a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating CC diagnostics forensics, gene mapping, identification or biological activity. CC diagnostics forensics, gene mapping, identification of mutations of responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00101-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed caption, but was obtained in electronic format directly from WIPO CR. Aftern. winc infrance data for this patent captures.
                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                         adrenergic, thrombin, endothelin, bombesin, endocrine, rhodopsin, opsin, odorant, cytomegaloviral and other GPR proteins. The peptides AAW03578-W03651 represent the N-terminal fragments of the above proteins. The receptor proteins were used to design polypeptides, pref. based on the transmembrane domains, for use in G-protein coupled receptor ligand binding assays. The polypeptide fragments retain biological activity such as binding a GPR ilgand of protein general ilgand binding as GPR (see AAW02747-W02999 for examples of polypeptide fragments). The polypeptide fragments can be used in compositions for treating subjects suffering from a pathology related to a GPR abnormality e.g. a psychotic disorder such as schizophrenia.
                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; Fig 8B(2); 184pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC product formed by ligating together oligonucleotides that encode glutamate/aspartate residues, expressing EV in a host cell, and ci isolating the protein product (P) of EV, where (P) is PP and at least CC (1) a recombinant fusion protein (I) comprising a polyanionic polypeptide at either one end or at both ends of it; (2) a CC and another polypeptide at either one end or at both ends of it; (3) a CC polyanionic polymer (II) conjugate comprising a polyanionic polymer and CC polyanionic polymer and CC polyanionic polymer of CC polyanionic polymer and CC polyanionic polymer and CC polyanises a nucleotide sequence encoding a polyanionic polymer and CC polyanises a nucleotide sequence, where the polyanionic polymer and CC polyglutamic acid or polyaspartic acid; (4) production of (I); (5) a cell CC polyglutamic acid or polyaspartic acid; (4) production of (I); (5) a cell CC polyglutamic acid or polyaspartic acid; (4) production of (I); (5) a cell CC polyglutamic acid or polyaspartic acid; (4) production of (I); (5) a cell CC protein or a larger than 10 kD, and is larger than 10 kDa; and (6) a recombinantly-produced polyanionic polymer (Y) that is of any molecular CC weight or is larger than 10 kD, and is conjugated to another protein. CC is useful for treating a disease or ailment in an individual by CC administering (I) to the individual. (I) is also useful for delivering an effective amount of a pharmaceutically active agent, a therapeutic CC protein or a drug to a patient in need of it, or for diagnostic and the polyanion of the individual of the protein of the polyanion of the
                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

                                                                           밁
                                                                                                                 Ş
                                                                                                                                                                                                                                                                                                                                                                        CC glutamate/aspartate residues, expressing EV in a host cell, and considered to glutamate/aspartate residues, expressing EV in a host cell, and combinant fusion protein (P) of EV, where (P) is PP and at least (C) of pris approximately of the same molecular weight. Also described: (C) in recombinant fusion protein (I) comprising a polyanionic polypeptide at either one end or at both ends of it; (2) a conjugation or polymer is polygationic polymer and CC polyanionic polymer (II) conjugate comprising a polyanionic polymer and CC polyaspartic acid; (3) a vector (III) comprising a cassette which CC comprises a nucleotide sequence encoding a polyanionic polymer and CC least one other nucleotide sequence, where the polyanionic polymer is CC polygiutamic acid or polyaspartic acid; (4) production of (I); (5) a cell CC (IV) comprising (III) or a vector that comprises a nucleotide sequence CC that encodes a polyanionic polymer that is larger than 10 kD, and is conjugated to another protein. CC (I) is useful for treating a disease or allment in an individual by CC administering (I) to the individual. (I) is also useful for delivering an effective amount of a phaymarchitically acrive agent a representic manner of a phaymarchitic allowed agent and the residual or a phaymarchitic allowed agent a protein a phaymarchitic allowed agent.
                                                                                                                                                             Matches
                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                              effective amount of a pharmaceutically active agent, a therapeutic protein or a drug to a patient in need of it, or for diagnostic and testing or research purposes. ABZ22045 to ABZ22131 and ABP56374 to ABP56400 represent sequences used in the exemplification of the pre
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a method (M) for producing a monodispersed preparation of a polyanionic polymer (PP) larger than 10 kD. (M) involves inserting into an expression vector (EV) a ligation product formed by ligating together oligonucleotides that encode
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Producing monodispersed preparation of polyanionic polymer for therapy, by expressing vector comprising ligation product of oligonuclectides encoding glutamate/aspartate residues in host cell and isolating the product -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WO200277036-A2
                                                                                                                                                                                                                                           Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC glutamate/aspartate residues, expressing EV in a host cell, and classing the protein product (P) of EV, where (P) is PP and at least CC (1) a recombinant fusion protein (I) comprising a polyanionic polypeptide at either one end or at both ends of it; (2) a recombinant fusion protein (I) comprising a polyanionic polymer (II) conjugate comprising a polyanionic polymer and CC enukine, where the polyanionic polymer is polyglutamic acid or CC polyaspartic acid; (3) a vector (III) comprising a cassette which CC comprises a nucleotide sequence encoding a polyanionic polymer and at CC least one other nucleotide sequence, where the polyanionic polymer is golyglutamic acid or polyaspartic acid; (4) production of (I); (5) a cell (IV) comprising (III) or a vector that comprises a nucleotide sequence that is larger than 10 kD, and (6) a recombinantly-produced polyanionic polymer (V) that is of any molecular weight or is larger than 10 kD, and is conjugated to another protein. CC (I) is useful for treating a disease or aiment in an individual by campinion or a patient in need of it, or for diagnostic and cc AbB56400 represent sequences used in the exemplification of the present CC invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Best Local

                                                                                                                                                                                                                                                                         cc monodispersed preparation of a polyanionic polymer (PP) larger than CC 10 kD. (M) involves inserting into an expression vector (EV) a ligation CC product formed by ligating together oligonucleotides that encode CC glutamate/aspartate residues, expressing EV in a host cell, and CC isolating the protein product (P) of EV, where (P) is PP and at least CC (1) a recombinant fusion protein (I) comprising a polyanionic polypeptide at either one end or at both ends of it; (2) a CC polyanionic polymer (II) conjugate comprising a polyanionic polymer and CC Leukine, where the polyanionic polymer is polygintamic acid or comprises a nucleotide sequence encoding a polyanionic polymer and CC Leukine, where the polyanionic polymer is polyglutamic polymer is polyglutamic acid or comprises a nucleotide sequence, where the polyanionic polymer is copylyglutamic acid or polyaspartic acid, (3) a vector (III) comprises a nucleotide sequence encoding a polyanionic polymer is copylyglutamic acid or polyaspartic acid, (4) production of (I); (5) a cell CC (IV) comprising (III) or a vector that comprises a nucleotide sequence that is larger than 10 kDa; and (6) a recombinantly-produced polyanionic polymer (V) that is of any molecular weight or is larger than 10 kD, and is conjugated to another protein. CC (I) is useful for treating a disease or aliment in an individual by its useful for treating a disease or aliment in an individual by campinate or a patient of a patient in need of it, or for diagnostic and CC Abpsido represent sequences used in the exemplification of the present cc invention.
                                                                                                                                        Matches
                                                                                                                                                                           Query Match
                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Producing monodispersed preparation of polyanionic polymer for therapy, by expressing vector comprising ligation product of oligonucleotides encoding glutamate/aspartate residues in host cell and isolating the

(I) is useful in gene therapy techniques (II) is useful in gene therapy techniques (II) crestore normal activity of (II) is useful in gene therapy techniques (II) (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention.

Sequence

```
polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy technique to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity.
                                                                                                                                                   The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           polypeptide (II) sequences. (I) is userur us nizzzzz, and for polymerase chain reaction (PCR) primers, oligomers, and for polymerase chain reaction and in recombinant production of (II). The and dene mapping, and in recombinant production of (II). The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess to discrete the contract of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 20; SEQ ID No 41622; 103pp; English

The polypeptides and DNA encoding them are useful in the production of vaccines for the treatment of leucocytozoanosis of fowl.
New isolated polynucleotide and encoded polypeptides, useful in
                                                                                                                                                                                                                                                                                                                                                                                                       31-MAR-2000; 2000US-0540217.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences, (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics foreneins cane manning identifications in withing diagnostics foreneins cane manning identifications in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG030377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO technical contracts of the contract direct
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence

and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in the polypeptide and polynucleotide sequences have applications
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess
                                                                                  diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    polypeptide (II) sequences. (I) is useful as hybridisation process, polymerase chain reaction (PCR) primers, oligomers, and for chromosome polymerase chain reaction for production of (II). The and gene mapping, and in recombinant production of (II). The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 20; SEQ ID No 37325; 103pp; English
